

1

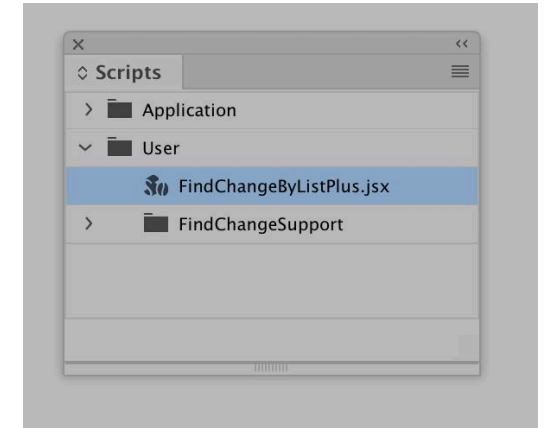

Open Scripts panel from the Window>Utilities menu. Select “User” folder and right-click / control-click. Click on the “Reveal in Finder” or “Reveal in Explorer” button.

*Please note, there are two versions of the script: one for Adobe CS6, one for Adobe CC. Each language version of InDesign requires different script.*

2

Copy the contents of the archive.zip to the folder called “ScriptsPanel” – see above. It is important to copy not only the .jsx file, but also the .txt file in the folder.

3

Double-click the “FindChangeByList Plus.jsx” script to run it. You can apply it to the whole document, story or selected text.
